

# **POST-ORDER TRAVERSAL**

# Outline of Post-Order Traversal

---

- **Three principle steps:**
  - Traverse **Left**
  - Traverse **Right**
  - Do work (**Current**)
- **Work can be anything**
- **Separate work from traversal**

- Traverse the tree "Post order":
  - Visit the tree's left sub-tree
  - Visit right sub-tree
  - Visit the current and do work

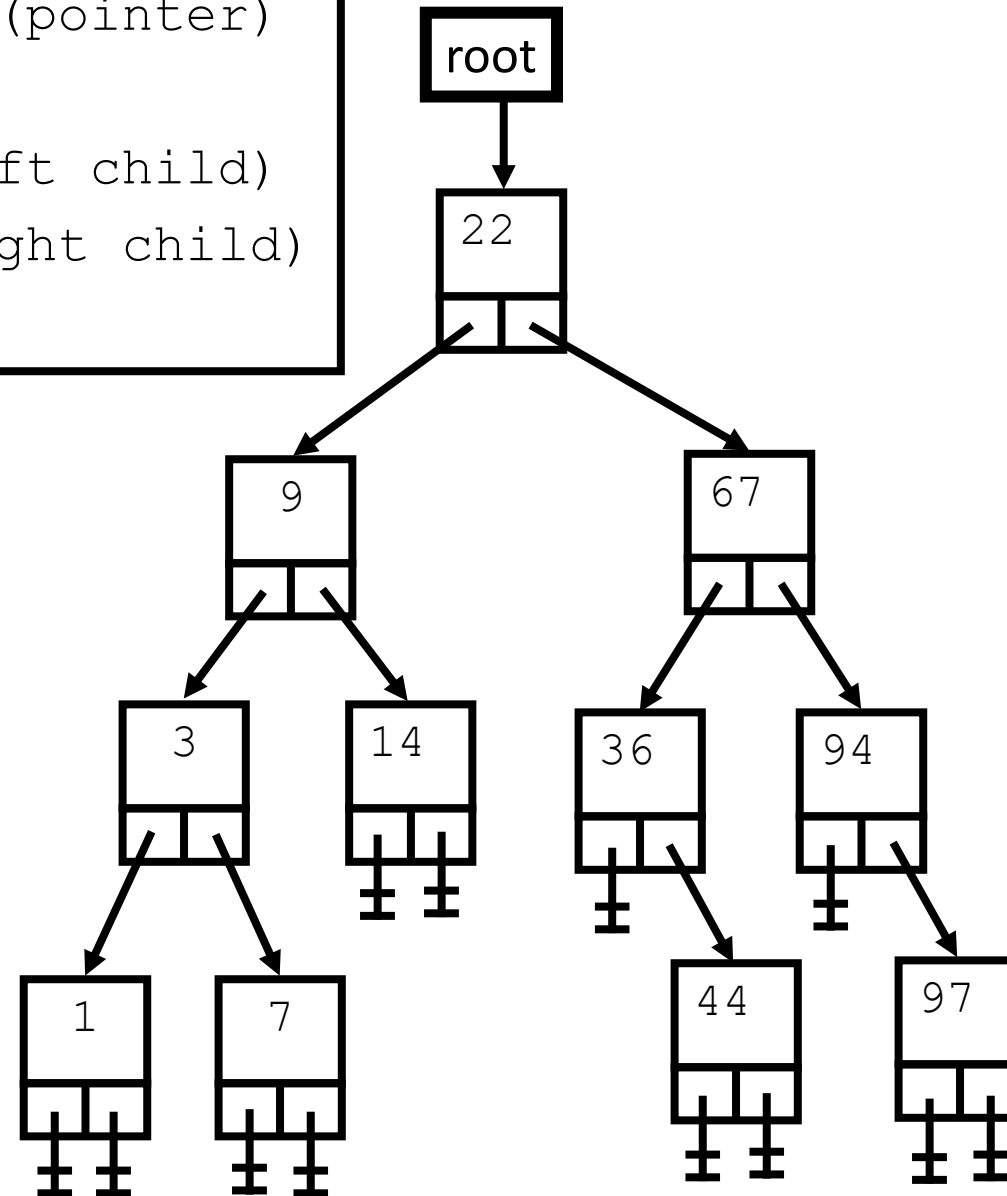

# Post-Order Traversal Procedure

---

```
procedure Post_Order(cur iot in Ptr toa Tree_Node)
  // Purpose: perform post-order traversal, call
  //           DoWhatever for each node
  // Preconditions: cur points to a binary tree
  // Postcondition: DoWhatever will be performed
  // on each tree node in "post-order" order
  if( cur <> NIL ) then
    Post_Order( cur^.left_child )
    Post_Order( cur^.right_child )
    Do_Whatever( cur^.data )
  endif
endprocedure    // Post_Order
```

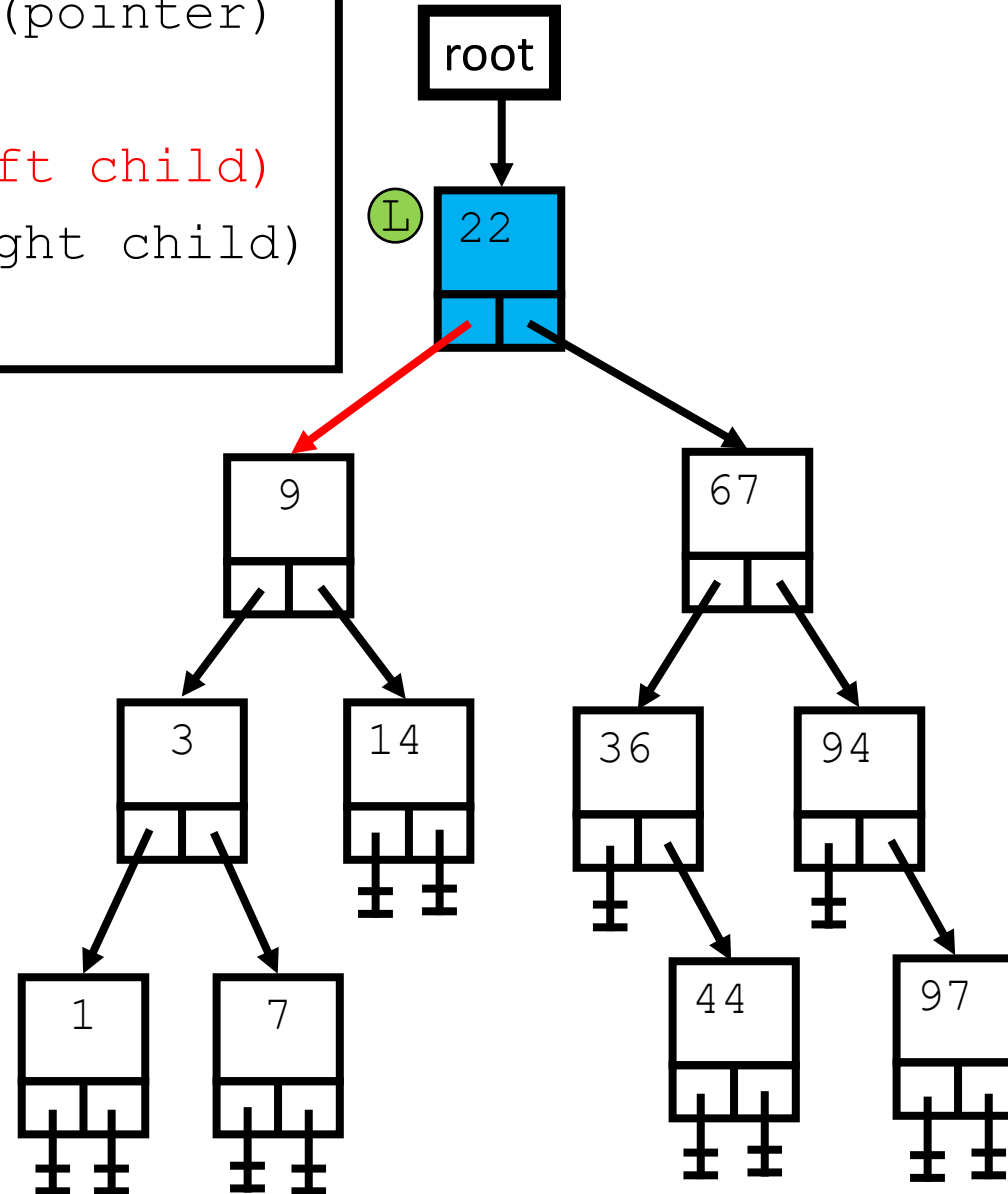

```
Proc PostOrderPrint(pointer)
  pointer NOT NIL?
```

- Ⓛ PostOrderPrint(left child)
- Ⓡ PostOrderPrint(right child)
